

Film Free Projection Extended READ ME

Film Free Projection Extended (FFPx) is a Windows Forms based program. To install the software, extract all the files from the FFPx.zip file and double click **setup.exe**.

Hopefully, the installation will proceed normally; you'll be asked about installing software from an "unknown" publisher. You can safely click ok to that.

Differences from FFP

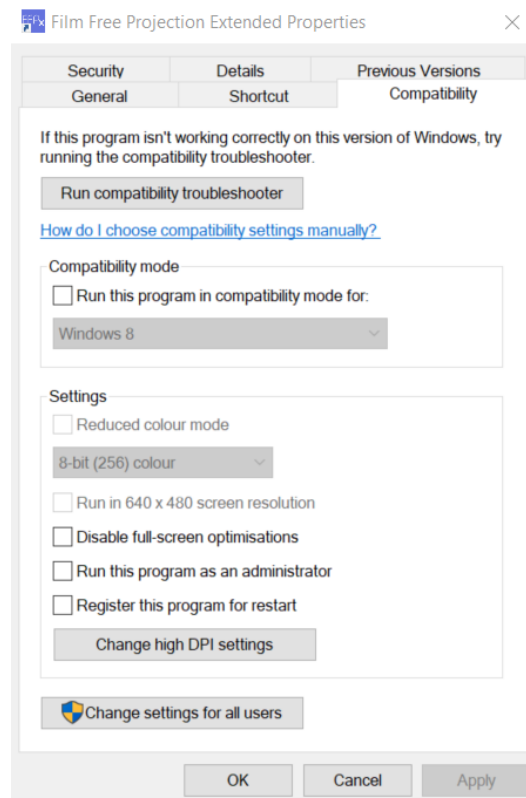

If you've upgraded from Film Free Projection (FFP), then FFPx looks quite different. FFPx has been designed to be more touch friendly, particularly during competitions. For example, to score an image you can touch the score box. A pop-up appears offering all the possible scores and you tap the score for that image.

FFPx also uses a Ribbon user interface instead of a menu system – hopefully this will make it easier to find things.

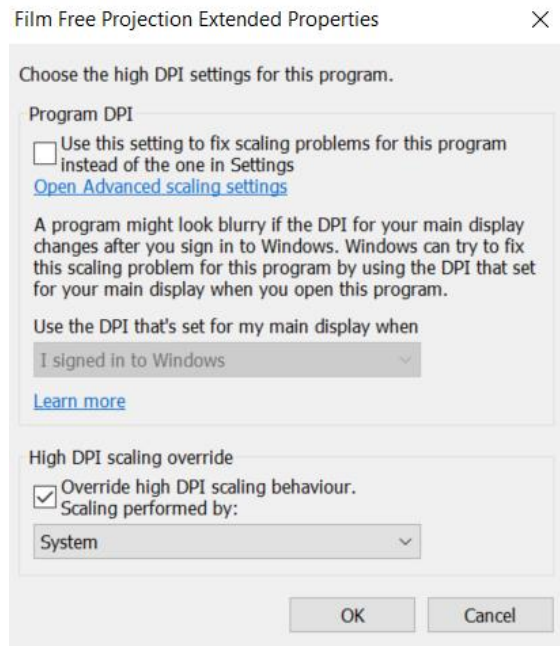

FFPx supports the widely used Photo Entry system, with FFPx, you can connect to your Photo Entry account and download competitions straight into FFPx. Once the competition has been scored, you can upload the results back to the Photo Entry website.

"Odd" behaviour/appearance on hi-DPI display?

FFPx's ribbon system sometimes appears distorted on hi-DPI displays. To fix that, right click the application and choose Properties. On the dialog that appears, select the Compatibility tab:

Now, select Change high DPI settings. Unfortunately, the "right" settings vary from machine to machine(!), but it's one of these two:

OR
